APPLICATION FOR AMENDMENT OF POLLUTION CONTROL PERMIT PA-3341

Preamble—The following application refers to a new wood-burning power boiler which will replace an existing fuel oil-fired power boiler of equivalent size. The new boiler will burn bark and other waste wood, reducing oil consumption by 70 per cent. The project conserves a non-renewable source of energy and provides an outlet for waste wood from sawmills which now presents a disposal problem.

THIS APPLICATION is to be filed with the Director, Pollution Control Branch, Parliament Buildings, Victoria, B.C. Any person who qualifies as an objector under section 13 (2) or (3) of the *Pollution Control Act* may, within 30 days of the date of application, or within 30 days of the date of publication in *The British Columbia Gazette* or in a newspaper, or, where service is required, within 30 days of the serving of a copy of the application, file with the Director an objection in writing to the granting of a permit, stating the manner in which he is affected. Those who do not so qualify may file with the Pollution Control Board an objection in writing under section 13 (6), in the same manner and time period as described above.

Crown Zellerbach Canada Limited, of 815 West Hastings Street, Vancouver B.C., hereby applies for amendment(s), as described below, to Pollution Control Permit PA-3341, granted on April 23, 1976, to Elk Falls Mill, Campbell River, to include the emission from a new hog fuel power boiler.

The land upon which the works are located is Lot 109, Sayward District.

The discharge or emission shall be located at No. 5 Power Boiler (wood-burning), to be situated immediately north of the existing Nos. 1, 2, and 3 Power Boilers.

The rate of discharge is (dry basis):
(a) Maximum, 187,000 SCFM. (b) Average daily (based on normal daily operating period), 187,000 SCFM.

The operating period during which contaminants will be discharged is continuous.

The characteristics of the contaminant(s) to be discharged are particulate matter 0.1 gr/SDCF (salt-free basis); water vapour, 27.6 per cent; CO₂, 16.2 per cent; Other boiler flue gases (nitrogen, oxygen, etc.), not applicable.

The type of treatment to be applied to the contaminant(s) is two-stage multiclones.

I, John Eric Francis Hiebert, Administrator, hereby certify that a copy of this application has been received by the Regional District of Comox-Strathcona.

This application, dated on September 8, 1977, was posted on the ground in accordance with the Pollution Control Regulations.
